### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Mr. Leonard Diana on 10/14/2010.

Please amend the claims submitted 8/19/2010 as follows:

Claim 12, line 8, after the word "performing", delete the words "physical or chemical"

Claim 12, line 8, after the words "first layer" and prior to the punctuation mark ",", add --- of the same type, physical or chemical, as the deposition used in forming the first layer ---

Claim 12, line 10, after the word "rate", delete the words "of deposition"

Claim 12, line 10, after the word "layer", and prior to the punctuation mark "." add --- , and the second layer has a higher resistivity at a light-incident side thereof than a resistivity of the first layer at a side opposite the light-incident side ---

Claim 13, line 9, after the words "intermediate layer", add the punctuation mark --- , ---

Claim 13, line 10, after the words "first layer", and prior to the punctuation mark "." add --- , and the second layer has a higher resistivity at a light-incident side thereof than a resistivity of the first layer at a side opposite the light-incident side ---

***Allowable Subject Matter***

Claim 1-8, 12 and 13 are allowed.

The following is an examiner's statement of reasons for allowance: Transparent zinc oxide layers graded in resistivity are known. In addition, transparent oxide layers formed from two or more layers of different compositions are known. Transparent conductive layers forming part of intermediate layers are known. Transparent conductive layers graded in resistivity used as an intermediate layer, by either composition as specified in the allowable claims, are not known. Furthermore, there is no motivation in the prior art to combine known transparent conductive layers which are graded in resistivity into an intermediate layer in a specified order, i.e. resistivity of the transparent conductive oxide continuously decreases through the thickness of the transparent conductive oxide from the p-layer side towards the n-layer side.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jayne Mershon whose telephone number is (571) 270-7869. The examiner can normally be reached on 9:00 AM to 5:00 PM, Monday through Thursday.
